Chalkboards and Markerboards

VITRE-STEEL Porcelain on Steel Writing Surfaces

Aarco's Vitre-Steel is manufactured in accordance with the Porcelain Enamel Institute (PEI) standards and is produced by a continuous coil process to insure the highest quality and consistent finish.

Vitre-Steel is a strong, hard, non-porous surface that is virtually indestructible. The porcelain on steel surface is fired at 1364° F. for Chalkboards and at 1472° F. for Markerboards. Both sides receive a base coat of porcelain enamel. The face side is fired a second time for a carefully controlled finish and color.

Standard sizes include heights of 48" or 60" and up to 192" (16') in length.

Markerboards are now available in two great finishes v2 Low Gloss and v3 High Gloss (see comparison for important details).

**Vitre-Steel carries a lifetime limited warranty when used as directed.
